**LevelLite® Self-Leveling Underlayment**

1. **Product Name**
   LevelLite® Self-Leveling Underlayment

2. **Manufacturer**
   Custom Building Products
   Technical Services
   10400 Pioneer Boulevard, Unit 3
   Santa Fe Springs, CA 90670
   Customer Support: 800-272-8786
   Technical Services: 800-282-8786
   Fax: 800-200-7765
   Email: contactus@cbpmail.net
custombuildingproducts.com

3. **Product Description**
   Formulated with CustomLite® Technology, LevelLite® is 40% lighter than other self-leveling underlayments, making it easier to pour and carry. Weighing just 3 lbs (1.36 kg) per square foot at 1/2" (13 mm) thickness, 3 lbs. (1.36 kg) lighter than traditional underlayments, it is excellent for installations where weight is a concern. Will not shrink or crack. A 30 lb (13.6 kg) bag covers the same area as a 50 lb (22.68 kg) bag. LevelLite helps level floors prior to the installation of ceramic tile, natural stone, resilient flooring, carpet, wood and other floor coverings. This quick-setting underlayment can be applied to 2" (5 cm) thick in one pour and seeks its own level in minutes. With proper installation, the use of LevelLite can achieve an extra heavy rating for high impact use in food plants, dairies, breweries and kitchens. LevelLite may be applied to in residential structures with floor joists up to 24" o.c. Formulated using Controlled Cure Technology®, LevelLite helps eliminate installation problems such as bond failure, crumbling and staining of resilient flooring caused by the free moisture found in traditional underlayments.

   **Key Features**
   - Lightweight formula for superior handling plus fast and easy leveling
   - Levels from feather edge up to 2" in one pour
   - Walkable in 4 hours
   - Exceeds TCNA requirements for ceramic tile installations

   **Uses**
   Suitable as an Underlayment for:
   - Vitreous, semi-vitreous or non-vitreous tile
   - Ceramic, mosaic or quarry tile
   - Impervious porcelain and glass tile
   - Cement-based precast terrazzo
   - Natural stone tile
   - Carpet
   - Wood, parquet
   - Vinyl composition tile (VCT)
   - Sheet vinyl flooring
   - Laminated flooring

   **Suitable Substrates**
   - Absorbent concrete
   - Non-absorbent concrete
   - Lightweight concrete
   - Gypsum-based underlayments
   - Existing ceramic tile
   - Cement terrazzo
   - Exterior grade plywood
   - OSB
   - Cutback adhesive residue
   - Resilient flooring

   **Composition of Product**
   LevelLite® is a dry, proprietary blend of copolymers, Portland cement, post industrial and consumer recycled aggregate and inorganic chemicals.

   **Benefits of Product in the Installation**
   - This product contributes to LEED®
   - Can be applied from feather edge to 2" (5 cm) thick in a single pour
   - Reduces bond failure and crumbling of resilient flooring
   - Cures fast and develops high early-strength for quick installation
   - Rated for extra heavy use on wood subfloors with joists to 24" (61 cm) per ASTM C627
   - Not formulated with silica sand

Published Date: 11/6/2018
Limitations to the Product

- When using over lightweight concrete or gypsum underlayment, the surface must first be prepared with RedGard® Waterproofing and Crack Prevention Membrane.
- Do not use when the temperature is below 50°F (10°C) or above 90°F (32°C).
- Do not use on sloped surfaces that require drainage.
- This product is not meant for use as a wear surface.
- Precautions should be taken when applying over post-tensioned concrete, pre-stressed concrete or prefabricated concrete planks. Contact CUSTOM technical services for further details.
- Do not bond directly to hardwood, Luan plywood, particle board, parquet, cushion or sponge-back vinyl flooring, metal, fiberglass or plastic. Contact CUSTOM technical services for recommendations.
- For installations over metal decks, contact CUSTOM technical services for recommendations.

Packaging

30 lb (13.6 kg) Bags

Technical Data

Applicable Standards

ASTM International (ASTM)
- ASTM C627 Standard Test Method for Evaluating Ceramic Floor Tile Installation Systems Using the Robinson-Type Floor Tester
- ASTM F1869 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride

Tile Council of North America (TCNA) TCNA Handbook for Ceramic Tile Installation, TCNA Method EJ171

Environmental Consideration

Custom® Building Products is committed to environmental responsibility in both products produced and in manufacturing practices. Use of this product can contribute towards LEED® v3 certification:
- Up to 2 points towards MR Credit 5, Regional Materials
- Up to 2 points towards MR Credit 4, Recycled Content

5 Instructions

General Surface Prep

USE CHEMICAL-RESISTANT GLOVES, such as nitrile, when handling product.

All surfaces must be structurally sound, clean, dry and free from contaminants that would prevent a good bond. Concrete must be fully cured. Concrete surfaces should be primed with LevelQuik Latex Primer. Smooth concrete surfaces, existing glazed tile, terrazzo, or polished stone may need to be roughened or scarified. For increased performance in demanding applications, concrete surfaces can be mechanically profiled and prepared by shotblasting, sandblasting, water-jetting, scarifying, diamond-grinding or other engineered approved methods (reference ICRI CSP 3 standards for acceptable profile height). CUSTOM's MBP Multi-Surface Bonding Primer may be used as an alternative to profiling the surface.

Bonding to Concrete Surfaces

Contaminants or curing compounds should be mechanically removed before installation. Concrete must be free of efflorescence and not subject to moisture beyond the floor covering manufacturers' limits or hydrostatic pressure. Lightweight concrete surfaces must have a tensile strength in excess of 200 psi (1.4 n/mm²).

Bonding to Plywood Surfaces

Plywood floors, including those under resilient flooring, must be structurally sound and meet all industry guidelines. For questions about proper subfloor installation, call Custom Technical Services. A 2.5 lb/yd² metal lath must be fastened every 6" - 8" (15 - 20 cm) with fasteners that have a galvanized or corrosion-resistant coating over primed surface.

OSB Underlayments

OSB underlayments should be coated with 10-15 mils of RedGard® Waterproofing and Crack Prevention Membrane prior to priming with LevelQuik Latex Primer. A 2.5 lb/yd² metal lath must be fastened every 6" - 8" (15 - 20 cm) with fasteners that have a galvanized or corrosion-resistant coating. A minimum of 1/4" (6 mm) of LevelLite can be applied over this properly prepared OSB.

LevelLite® Self-Leveling Underlayment

Gypsum-based underlayments must obtain a minimum 2000 psi (13.8 MP) compressive strength. The underlayment must be sufficiently dry and properly cured to the manufacturer’s specifications for permanent, non-moisture permeable coverings. Surfaces must be structurally sound and subject to deflection not to exceed the current industry standards. Surfaces shall be free of all grease, oil, dirt, dust, curing compounds, waxes, sealers, efflorescence, or any other foreign matter.

All Gypsum surfaces should be primed with a properly applied sealer or a primer coat of RedGard, consisting of 1 part RedGard diluted with 4 parts clean, cool water. Mix in a clean bucket at low speed to obtain a lump-free solution. The membrane can be brushed, rolled or sprayed to achieve an even coat. Apply the waterproofing coating to the floor at a rate of 300 sq. ft/l (7.5 sq. m/L). Drying time depends on site conditions, but is normally less than 1 hour. Extremely porous surfaces may require 2 coats. At this point, LevelQuik Latex Primer and LevelLite can be applied to the primed gypsum-based surface. Refer to the individual product data sheet or packaging directions for application instructions. Expansion joints must be installed in accordance with local building codes and industry guidelines.

**Bonding to Cutback Adhesive**

Adhesive layers must be removed. Use extreme caution; adhesives may contain asbestos fibers. Do not sand or grind adhesive residue, as harmful dust may result. Never use adhesive removers or solvents, as they soften the adhesive and may cause it to penetrate into the concrete. Adhesive residue must be wet-scraped to the finished surface of the concrete, leaving only the transparent staining from the glue. To determine desirable results, do a test bond area before starting. Refer to the RFCI Pamphlet “Recommended Work Practices for Removal of Resilient Floor Coverings” for further information.

** Priming**

Prime all surfaces with LevelQuik Latex Primer before application.

** Joints or Cracks in Substrate**

Expansion joints and cold joints, as described in ANSI A108.01, should be carried from the substrate up through the tile or flooring surface and filled with an appropriate elastomeric sealant, such as Custom's® 100% Silicone Caulk. For the proper treatment of control or saw cut joints and cracks for flooring, refer to ASTM F710. For tile installations, refer to TCNA Details E1171, F125 & F125A. Contact Custom’s® Technical Services for additional information.

**Mixing Ratios**

Mix the entire 30 lb (13.6 kg) bag of powder with 5 1/2 to 6 quarts (5.2-5.7 L) of clean, cool water.

**Mixing Procedures**

Mix 30 lb. (13.6 kg) bag of powder with the appropriate amount of clean, cool water. Slowly add powder to water while mixing with a heavy-duty 1/2" (13 mm) electric drill and an “egg-beater” mixing paddle at minimum 650 RPM. Thoroughly mix for 2 minutes to a lump-free consistency. Do not overmix. Overmixing or moving the mixer up and down during the mixing process could trap air, which could shorten the pot life or cause pinholing during application and curing.

**Application of Product**

Apply LevelQuik Latex Primer according to the specifications on its technical data sheet prior to the application of LevelLite.

Pour LevelLite, then spread with a long-handled gauged spreader. LevelLite will seek its own level during the first 20 minutes. For feather-edging and touch-ups, use a smoothing tool. Can be applied up to 2" (5 cm) thick in one application. If a second layer is required, install immediately after the first layer has set to a walkable hardness. If the first layer has dried over 12 hours, re-prime before second application. The surface will dry to a walkable hardness in 2 - 4 hours. For pumping and large scale applications, contact Custom's Technical Services Department for more information.

**Curing of Product**

LevelLite® dries to a walkable hardness in 2 - 4 hours. When installing ceramic tile and stone, allow 4 hours; for impervious floor coverings, allow 14 hours. Drying times can vary with temperature and humidity. Test for moisture content before applying vinyl or wood flooring.

**Cleaning of equipment**

Clean with water before the material dries.

**Health Precautions**

This product contains Portland cement. Avoid eye contact or prolonged contact with skin. Wash thoroughly after handling. If eye contact occurs, flush with water for 15 minutes and consult a physician. Use with adequate ventilation; do not inhale dust and wear a NIOSH-approved respirator. If ingested, do not induce vomiting; call a physician immediately.

**Conformance to Building Codes**

Installation must comply with the requirements of all applicable local, state and federal code jurisdictions.

**Product Warranty**

Obtain the applicable **LIMITED PRODUCT WARRANTY** at [www.custombuildingproducts.com/product-warranty](http://www.custombuildingproducts.com/product-warranty) or send a written request to Custom Building Products, Inc., Five Concourse Parkway, Atlanta, GA 30328, USA. Manufactured under the authority of Custom Building Products, Inc. © 2017 Quikrete International, Inc.

When LevelLite® Self-Leveling Underlayment is used as a part of a qualifying full installation system of CUSTOM products, the installation can qualify for up to a lifetime system warranty. CUSTOM will repair and/or replace, at its discretion, the affected area of the system. For more information, find details and limitations to this warranty at [custombuildingproducts.com](http://custombuildingproducts.com).

**Product Maintenance**

Properly installed product requires no special maintenance. LevelLite® is not recommended as a finish or wear surface.
