Technical Chart

€¢ Stain resistant to most household contaminants (CTI - 072)
€¢ Improves gloss of smooth granite
€¢ Does not darken granite

3. **Instructions**

General Surface Prep

The surface must be clean, dry and free of wax, coatings or finishes. TileLab® Heavy-Duty Cleaner & Stripper will clean the surface and remove any wax or acrylic finishes.

Application of Product

USE CHEMICAL-RESISTANT GLOVES, such as nitrile, when handling product.

Test in an inconspicuous area of stone prior to application for desired results.Apply sealer (Part 1) liberally using a sponge or brush. Allow it to penetrate for 15 - 30 minutes. Wipe off any excess before it dries on the surface of the stone. If first coat has been absorbed, apply a second coat immediately following the same procedure. Very porous surfaces may require additional applications. Wait 1 hour before applying Polish (Part 2). Shake Granite Polish (Part 2) well and apply a thin, even coat to surface of stone just sealed. Apply sparingly; only a small amount is needed. Use a dry, clean cloth provided to apply polish. Wipe clean once polish has set for 8 - 10 minutes. Buff surface to a shine with the second clean, dry cloth provided. Wipe surface with clean, dry cloth as a final step.

Cleaning of Equipment

Rinse the polishing pads thoroughly with warm water and allow to dry for future use.

Health Precautions

MAY BE HARMFUL IF SWALLOWED. Do not induce vomiting. Give plenty of water and call a physician immediately. If eye contact occurs, flush immediately with plenty of water for 15 minutes. If contact with sensitive skin occurs, wash with soap and water. Call physician if necessary. Do not mix with other solutions.
